Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The present invention differs from the cited prior art in multiple ways:

Patent 5,920,859 – is based upon the content of the document and the occurrence of words in that document in relation to the comparison document.

Patent Publication 2001/0020238 – is based upon links to a document but only does calculation based upon a single document and therefore does not present an inferred relationship using two arrays to compare the links that the documents have in common and their respective weights.

Additionally the specification provides additional detail for the interpretation of the claims. The applicant has claimed Internet object as web document. Additionally the applicant provides example of how inferred weighting is different then other weight process used by the prior art.

It is important to note that inferred relation weighting process 32 utilizes known "explicit" relationships (i.e., known relation weights between Internet objects) to determine the strength of unknown "implicit" relationships (i.e., inferred relation weights between Internet objects). Further, this functionality allows for the refinement of these known relationships while inferring these unknown relationships.

The requirement for inferred relation is a calculation that is require to be done by a query device using the arrays mention in the claim to calculate how the documents are related indirectly why which other internet object like website are hype linked in common or have a

third common website. Therefore for the following relation the present invention distinguishes over the prior art of record. Additionally the documents were not directly linked.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
